

Agio Summit — Private POC scope

Contact: Nash Vedula · info@roverax.ai

Duration: 4 weeks · Fixed fee scoped on the intro call · Anonymized · Read-only · Human approval gates

What you provide

- One anonymized capital request (PDF or pack your team already uses)
- The evidence files your team already assembles for that ask
- Optional in weeks 3–4: read-only extracts (policy admin, actuarial output, GL/cash)

What we deliver

- The demo's exact flow on your documents
- Missing-evidence map with named gate owners
- Reconciled evidence pack
- Role-based decision packs (e.g., CFO / IC)

Boundary

- Runs inside your tenancy
- Read-only service accounts; write paths do not exist
- No training on your data
- Humans hold every approval

Timeline

Week	Focus
1	Parse + map the ask and evidence inventory
2	Fit evidence taxonomy to your diligence checklist
3	Reconcile loop + human gates
4	Readout with your IC-style pack

Success criteria

Agreed in week 1. Examples: share of evidence items auto-mapped; cycle time vs your current diligence checklist; gate clarity for pricing readiness.

Commercials

Fixed fee — scoped on the intro call. No production integration required for the POC.

Out of scope

Live policyholder systems, payment paths, journal posts, and autonomous approval.
